B44 LiPo Installation Made Easy!

For Reedy #710, #712

The Factory Team LiPo battery cradle replaces the Team Associated's B44 stock NiMH battery holders so that LiPo batteries can be installed securely without messy double-sided tape or adhesives.

Specifically sized for use with Reedy's 5100mAh (#710) and 4200mAh (#712) saddle pack LiPo batteries, the cradle is CNC machined from light and durable 2.5mm woven carbon fiber. With internal dimensions of 68.9mm x 46.9mm, other hard case LiPo batteries that fall within this measurement can also be used.

Installation is as simple as removing the existing battery trays, loosening a few screws, sliding the cradle into position, then re-installing the stock posts and straps. A simple modification to the side body mounts is also necessary. The result is a B44 that looks like it came LiPo-ready from the factory! Ilość w opakowaniu: 1
